SUMMARY

MLOps and GenAI Engineer building **LLM** applications with **RAG, LangChain, Chroma** and **AI agents** and deploying them through **CI/CD** on **Docker** and **Kubernetes,** backed by **4+ years** of production **Python.** Built SotonBuddy, a University of Southampton campus chatbot on **Llama fine-tuned with LoRA** using **Hugging Face** and **PyTorch,** used by **68 of 83** students in the MSc class. Freelances on **MLOps** with **MLflow** and **Airflow,** and at Capgemini Engineering wrote **2** Python automation tools that cut manual investigation by around **80%.**

TECHNICAL SKILLS

Generative AI and LLMs: LLMs, RAG, Embeddings, Chroma, LangChain, OpenAI API, LLM Fine-Tuning, LoRA, Hugging Face Transformers, PyTorch, NLP, AI Agents (Tool Calling), Multi-Agent Systems, LLM Evaluation, Prompt Engineering, Llama, Chatbots, TensorFlow, NumPy, Claude Code, Cursor
MLOps and Deployment: End-to-End CI/CD Deployment Pipelines, GitHub Actions, Jenkins, Docker, Kubernetes, Helm, Terraform, MLflow, Airflow, DVC, Git, Linux
Backend and APIs: Python, FastAPI, REST APIs, Microservices, OpenAPI, async/await, Concurrency, C, C++, Java, Spring Boot, Go, TypeScript, React, Bash
Data and Pipelines: SQL, ETL, Data Pipelines, Data Validation, Data Quality, Apache Kafka, RabbitMQ, Snowflake
Databases: PostgreSQL, MySQL, MongoDB, Redis, Relational Databases, Query Optimisation, Firebase
Cloud: AWS (EC2, S3, Lambda, RDS, ECS, EKS), Azure, GCP
Quality and Ways of Working: Pytest, Unit Testing, Automated Testing, Integration Testing, TDD, Code Review, Root Cause Analysis, GDB, Agile, Scrum, Jira, Mentoring
Observability and Security: Prometheus, Grafana, ELK, Datadog, OpenTelemetry, Splunk, OAuth2, JWT, AES-256 Encryption, Data Governance

PROFESSIONAL EXPERIENCE

Backend Engineer, Part-time | Malvox, cybersecurity startup, United Kingdom — Feb 2025 - Jul 2025

- Designed the PostgreSQL data model and the REST integrations consuming 3 UK Government data services in a 6-person startup, transforming semi-structured responses into validated structured records.
- Containerised the integration services with Docker and deployed them on Kubernetes through the CI/CD pipeline, taking each release from code to a running service.
- Applied data governance and security practice across OAuth2, JWT, HTTPS/TLS and AES-256 encryption for sensitive data, writing automated validation alongside each integration on Jenkins CI.

Associate II - Software Engineer | Capgemini Engineering, India — Nov 2021 - Nov 2024

- Developed 2 Python automation tools that cut manual investigation time by around 80%, then handed them over through knowledge transfer so the team could run them unaided.
- Owned resolution of 40+ production defects and delivery of 7 features over 3 years, analysing complex data structures and system behaviour with GDB and log analysis and contributing to a 25% reduction in MTTR.
- Led software design and development on production-critical Python, C/C++ and Linux systems, documenting workflows and giving guidance to junior engineers on debugging and test practice.

Freelance Mobile Application Developer | Upwork, fintech client in Australia — Feb 2021 - Oct 2021

- Led end-to-end delivery of a full-stack fintech application in Flutter, Firebase and PostgreSQL with Razorpay and PayPal payment integrations, achieving 20% faster release cycles while acting as principal technical contact and coordinating 3 to 4 engineers.

PROJECTS

- AItoScreen (aitoscreen.com), in progress. Multi-agent GenAI platform where a crew of AI agents handles everything from screenwriting and scene planning to audio and video generation to produce a complete film sequence from an idea, using open-source audio and video generation models from Hugging Face. Built and released through a CI/CD pipeline.
- AI engineering platform, in progress. Python service using LLMs, RAG over a Chroma vector store, LangChain and the OpenAI API that grades code automatically and generates CI tests, with agent tool calling and evaluation over saved cases.
- Data, platform and MLOps engineering, freelance for a UK client via Alignerr, 2026 to present. Model deployment and pipeline automation with Docker, Kubernetes, MLflow and Airflow.
- SotonBuddy, University of Southampton campus assistant. Chatbot that gives students turn-by-turn walking directions to lecture buildings and answers questions about the university, built on Llama, an open-source LLM fine-tuned with LoRA on question and answer pairs from university website documents. Used by 68 of 83 students in the MSc class. Python, PyTorch, Hugging Face Transformers, FastAPI, React and Docker.
- Topic-based image retrieval, BSc dissertation. Web application in JavaScript, PHP, SQL and TensorFlow with image processing and custom ranking logic.
- Link2Feed, MSc dissertation. Kotlin and Android application integrating UK Government APIs with Firebase, with secure data handling and end to end testing.

EDUCATION

MSc Software Engineering, University of Southampton, United Kingdom — 2024 - 2026
BSc Information Technology, AISSMS Institute of Information Technology, Pune, India — 2018 - 2020
Diploma in Information Technology, RIT Polytechnic, India — 2015 - 2017

CERTIFICATIONS

Career Essentials in GitHub Professional Certificate (LinkedIn Learning and GitHub, 2026) | Claude Code in Action (Anthropic, 2026) | Docker Foundations Professional Certificate (LinkedIn Learning and Docker, 2026) | Hands-On Essentials: Data Warehousing Workshop (Snowflake, 2026) | Hands-On Essentials: Collaboration, Marketplace and Cost Estimation Workshop (Snowflake, 2026) | Cloud Computing (IBM, 2023) | Dart Functions Framework (Google Cloud, 2023) | Agile Software Development (Coursera, 2022) | Amazon Web Services S3 Bucket (Coursera, 2021) | Java Object-Oriented Programming (LinkedIn Learning, 2021)
